Research Turned into Products

2020-2021	<i>Project IRL</i> . I led a team that launched a suite of co-located Augmented Reality experiences used by millions of people on Snapchat designed to foster playful in-person interactions.
2020-2021	<i>Significant Otter</i> and <i>BFF</i> . I led a team that launched two experimental Apple Watch apps for couples used by tens of thousands of people . The app explored new ways of leveraging biosignals to support more authentic interactions among close ties. The apps were recognized and featured by Apple and Product Hunt.
2015-2017	<i>Calendar.help</i> . I led a team at Microsoft Research that created a virtual scheduling assistant powered by human and machine intelligence. The product was released as a <i>Microsoft's Office</i> service, and the assistant branded as a <i>Cortana</i> . The product is now used by thousands of organizations .
2014	<i>Journeys and Notes</i> . I led a team at Microsoft Research that created an urban computing app for travelers and commuters to connect with one another. The app was released on Google Play and was installed by tens of thousands of people from around the world.
2007-2012	<i>Scratch Online Community</i> . I led a team at MIT that created the Scratch online community, a website where children from around the world learn to program, share, and remix animations and video games. The community has grown to over 40 million people from around the world.
2007	<i>Sana</i> . Along with physician Leo Celi, I developed a mobile health app for nurses to share images of pre-cancerous tissue with remote doctors. This project was piloted with a health organization in Zambia, and is now an academic program at MIT.
